

Step-by-Step Guide: Firebase Hosting Deployment

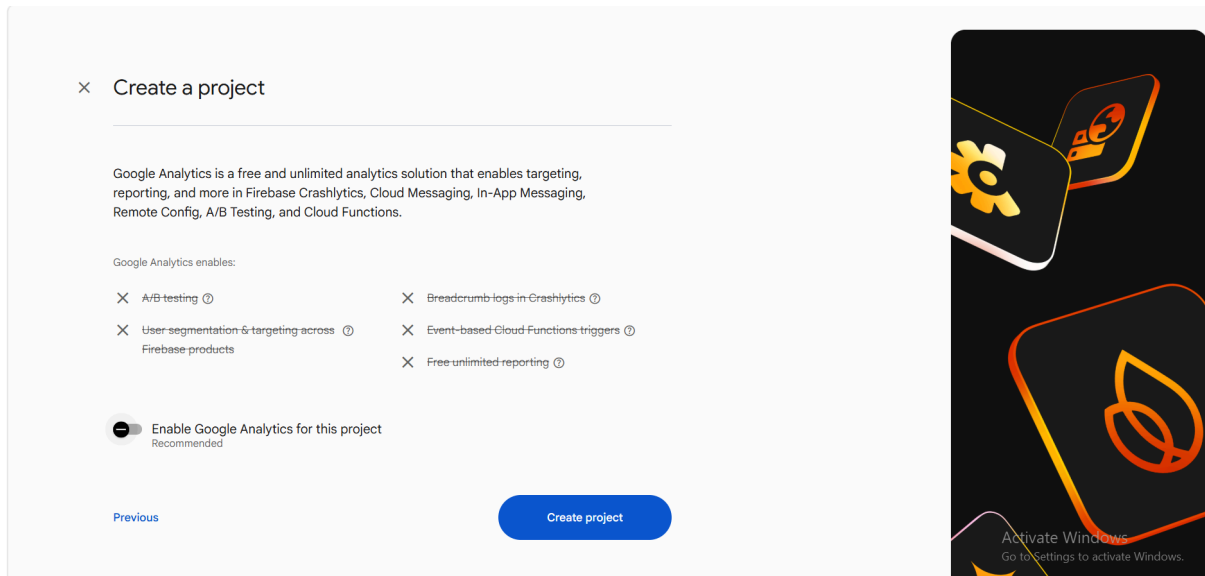

Step 1: Create a new project on Firebase Console and set the project name to "Shoes Website"

Step 2: Reviewing the additional Firebase features and proceeding with the initial project configuration

Step 3: Finalizing the project creation process to initialize the hosting environment.

Step 4: Install the Firebase CLI globally on the system using the "npm install -g firebase- tools" command

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.26100.8246]
(c) Microsoft Corporation. All rights reserved.

C:\Windows\System32>D:

D:\>cd karma-master

D:\karma-master>npm install -g firebase-tools
npm warn deprecated json-ptr@3.1.1: Package no longer supported. Contact Support at https://www.npmjs.com/support for more info.
npm warn deprecated node-domexception@1.0.0: Use your platform's native DOMException instead
npm warn deprecated uuid@8.3.2: uuid@10 and below is no longer supported. For ESM codebases, update to uuid@latest. For CommonJS codebases, use uuid@11 (but be aware this version will likely be deprecated in 2028).
npm warn deprecated glob@10.5.0: Old versions of glob are not supported, and contain widely publicized security vulnerabilities, which have been fixed in the current version. Please update. Support for old versions may be purchased (at exorbitant rates) by contacting i@izs.me
npm warn deprecated uuid@9.0.1: uuid@10 and below is no longer supported. For ESM codebases, update to uuid@latest. For CommonJS codebases, use uuid@11 (but be aware this version will likely be deprecated in 2028).

changed 705 packages in 44s

91 packages are looking for funding
  run `npm fund` for details

D:\karma-master>
```

Step 5: Sign in to Google via the Firebase CLI to authenticate and link the local environment with the Firebase account

```
D:\karma-master>firebase login
Already logged in as malkdsalah@gmail.com

D:\karma-master>
```

Step 6: Initialize the Firebase project in the local directory and configure the Hosting settings

```
D:\karma-master>firebase init

#####
##           ##
#####
##           ##
#####
##           ##
#####

You're about to initialize a Firebase project in this directory:

D:\karma-master

✓ Are you ready to proceed? Yes
✓ Which Firebase features do you want to set up for this directory? Press Space to select features, then Enter to
confirm your choices. Hosting: Set up deployments for static web apps

=== Project Setup

First, let's associate this project directory with a Firebase project.
You can create multiple project aliases by running firebase use --add,

i Using project shoes-website-8a953 (Shoes Website) .

=== Hosting Setup

Your public directory is the folder (relative to your project directory) that
will contain Hosting assets to be uploaded with firebase deploy. If you
have a build process for your assets, use your build's output directory.

✓ What do you want to use as your public directory? public
✓ Configure as a single-page app (rewrite all urls to /index.html)? No
✓ Set up automatic builds and deploys with GitHub? No
i public\404.html is unchanged
i public\index.html is unchanged

=== Agent Skills Setup
If you are using an AI coding agent, Firebase Agent Skills make it an expert at Firebase.
✓ Would you like to install agent skills for Firebase? No

+ Wrote configuration info to firebase.json
+ Wrote project information to .firebaserc
+ Firebase initialization complete!
```

Step 7: Run a local server using "firebase serve" to preview and test the website before deployment

```
\karma-master>firebase serve

== Serving from 'D:\karma-master'...

hosting[shoes-website-8a953]: Serving hosting files from: public
hosting[shoes-website-8a953]: Local server: http://localhost:5000
```

Step 8: Deploy the website to Firebase Hosting using the "firebase deploy" command to make it live

```
D:\karma-master>firebase deploy
```

```
=== Deploying to 'shoes-website-8a953'...
```

```
i deploying hosting
```

```
i hosting[shoes-website-8a953]: beginning deploy...
```

```
i hosting[shoes-website-8a953]: found 323 files in public
```

Step 9: Successfully deployed the "Shoes Website" and verified the final live version on the browser.
